

Why Mondrian Fixed Income?

Strong track records - we believe this is repeatable for the following reasons:

- Financially robust - Ownership directly aligns with client's interests
- Well-resourced team - Stable, well resourced team with no reliance on 'star managers'
- Nimble - Manageable AuM and focused team means we can continue to rapidly exploit opportunities
- Competitive management fees

Strategy at a Glance

- Strategy Inception: April 1, 2010
- We invest in global bond markets that best compensate for inflation and sovereign credit risks measured by a market's Prospective Real Yield
- Currency allocation: Purchasing Power Parity approach used; supplemented by our sovereign credit analysis
- Opportunistic exposure to emerging markets debt, nominal bonds and corporate credit
- Strong performance at times of financial market stress

Calculations for Yield to Maturity, Modified Duration, Average Maturity and Average Credit Rating are based on generally accepted industry standards. All Strategy characteristics are derived by first calculating the characteristics for each security, and then calculating the weighted-average of these values for the Strategy. The details of exact calculations can be provided upon request. All characteristic data provided is produced using Mondrian’s accounting system data.

Past performance is not indicative of future results. An investment involves the risk of loss. The investment return and value of investments will fluctuate. There can be no assurance that the investment objectives of the strategy will be achieved.

Performance results marked “Gross” do not reflect deduction of investment advisory fees but are net of transaction costs and withholding tax. Investment returns will be reduced accordingly. Performance returns marked “Net” reflect deduction of investment advisory fees and are calculated by deducting a quarterly indicative fee from the quarterly composite return. The indicative fee is defined as being the effective fee rate (or average weighted fee) at the composite’s minimum account size. Actual net composite performance would be higher than the indicative net performance shown because some accounts have sliding fee scales and therefore lower effective fee rates.
