

Quarterly Headlines

Global market returns diverged in the fourth quarter, with strong US performance offsetting weakness in Europe and Asia. After falling early in the quarter, global markets rebounded sharply in November following Donald Trump’s US election victory. Cyclical sectors outperformed, driven by expectations that a Republican-controlled Congress would implement pro-growth policies, including tax reform and deregulation, boosting corporate profitability. Health care lagged this pro-cyclical rally; investor concerns about the incoming US administration’s potential negative impacts further challenged the sector.

Stock selection in the US was the primary driver of underperformance but sector allocation effects, as well as adverse currency movements, also detracted from relative returns. Within the US, stock selection in IT was weak with CDW a notable underperformer after the company reported disappointing results. Not holding index heavyweights Nvidia and Apple, which were strong through the period, and the underperformance of Samsung, which continued to weaken on concerns it was behind peers in the development of AI-related semiconductors, further impacted stock selection in IT. Exposure to healthcare was also a headwind, with HCA Healthcare the main detractors after reporting disappointing results. Overweight exposure to defensive sectors, along with the relatively weaker Japanese yen and euro, also detracted from returns.

Strategy at a Glance

- Strategy Inception: January 2019
- Investment Team Size of 7
- Active, value-oriented defensive strategy
- Detailed, long-term fundamental analysis
- Consistent application of income-oriented valuation approach
- Portfolio contains 35 - 50 securities
- Annual turnover is generally 25 - 45%

Defensive Characteristics

Important Notes and Disclosures

Mondrian claims compliance with the Global Investment Performance Standards (GIPS®). Mondrian is a value-oriented defensive manager seeking to achieve high real returns for its clients. All products utilize an income-oriented value discipline. Mondrian's methodology is applied consistently to markets and individual securities, both bonds and equities. The Global Equity ESG Composite includes U.S. dollar based discretionary portfolios, measured against the Morgan Stanley Capital International World or equivalent Index, net of withholding taxes. The portfolios invest in Developed Market equities with discretion to invest in countries outside the index including Emerging Market countries, with an allowance for hedging. Environmental, social and governance principles-based exclusions are applied to portfolio construction. The MSCI World Index assumes the reinvestment of dividends after the deduction of withholding tax and approximates the minimum possible dividend re-investment, unless the benchmark is specifically described as a "Gross" benchmark. To receive a complete list and description of composites and/or a presentation that adheres to the GIPS standards, contact Mondrian Investment Partners (U.S.), Inc at 215-825-4500.

All portfolio data is based on the Mondrian Representative Account for the strategy.

Neither MSCI nor any other party involved in or related to compiling, computing or creating the MSCI data makes any express or implied warranties or representations with respect to such data (or the results to be obtained by the use thereof), and all such parties hereby expressly disclaim all warranties of originality, accuracy, completeness, merchantability or fitness for a particular purpose with respect to any of such data. Without limiting any of the foregoing, in no event shall MSCI, any of its affiliates or any third party involved in or related to compiling, computing, or creating the data have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages. No further distribution or dissemination of the MSCI data is permitted without MSCI's express written consent.

This Periodic Update contains supplemental information which complements the Mondrian Global Equity ESG Composite GIPS compliant presentation. Additional information is available upon request.

A Bull Market period is defined as one in which the benchmark showed a positive return, and a Bear Market period when the benchmark showed a negative return.

Calculations for P/E, P/B, dividend yield and market caps are based on generally accepted industry standards. All Strategy characteristics are derived by first calculating the characteristics for each security, and then calculating the weighted-average of these values for the Strategy. The details of exact calculations can be provided upon request. All characteristic data provided is produced using Mondrian's accounting system data.

Past performance is not indicative of future results. An investment involves the risk of loss. The investment return and value of investments will fluctuate. There can be no assurance that the investment objectives of the strategy will be achieved.

Performance results marked "Gross" do not reflect deduction of investment advisory fees but are net of transaction costs and withholding tax. Investment returns will be reduced accordingly. Performance returns marked "Net" reflect deduction of investment advisory fees and are calculated by deducting a quarterly indicative fee from the quarterly composite return. The indicative fee is defined as being the effective fee rate (or average weighted fee) at the composite's minimum account size. Actual net composite performance would be higher than the indicative net performance shown because some accounts have sliding fee scales and therefore lower effective fee rates.

Views expressed were current as of the date indicated, are subject to change, and may not reflect current views. Views should not be considered a recommendation to buy, hold or sell any security and should not be relied on as research or investment advice. This Periodic Update may include forward-looking statements. All statements other than statements of historical facts are forward-looking statements (including words such as "believe," "estimate," "anticipate," "may," "will," "should," "expect"). Although we believe that the expectations reflected in such forward-looking statements are reasonable, we can give no assurance that such expectations will prove to be correct. Various factors could cause actual results or performance to differ materially from those reflected in such forward-looking statements.
